Bank of Ireland Group plc Year end Pillar 3 Disclosures December 2021

Forward-looking statement Bank of Ireland Group plc

This document contains forward-looking statements with respect to certain of the Bank of Ireland Group plc (the 'Company' or 'BOIG plc') and its subsidiaries' (collectively the 'Group' or 'BOIG plc Group') plans and its current goals and expectations relating to its future financial condition and performance, the markets in which it operates and its future capital requirements. These forward-looking statements often can be identified by the fact that they do not relate only to historical or current facts. Generally, but not always, words such as 'may,' 'could,' 'should,' 'will,' 'expect,' 'intend,' 'estimate,' 'anticipate,' 'assume,' 'believe, 'plan,' 'seek,' 'continue,' 'target,' 'goal,' 'would,' or their negative variations or similar expressions identify forward-looking statements, but their absence does not mean that a statement is not forward-looking.

Examples of forward-looking statements include, among others: statements regarding the Group's near term and longer term future capital requirements and ratios, level of ownership by the Irish Government, loan to deposit ratios (LDRs), expected impairment charges, the level of the Group's assets, the Group's financial position, future income, business strategy, projected costs, margins, future payment of dividends, the implementation of changes in respect of certain of the Group's pension schemes, estimates of capital expenditures, discussions with Irish, UK, European and other regulators and plans and objectives for future operations, and the impact of the COVID-19 pandemic particularly on certain of the above issues and generally on the global and domestic economies. Such forward-looking statements are inherently subject to risks and uncertainties, and hence actual results may differ materially from those expressed or implied by such forward-looking statements.

Nothing in this document should be considered to be a forecast of future profitability or financial position of the Group and none of the information in this document is or is intended to be a profit forecast or profit estimate. Any forward-looking statement speaks only as at the date it is made. The Group does not undertake to release publicly any revision to these forward-looking statements to reflect events, circumstances or unanticipated events occurring after the date hereof.

Introduction Bank of Ireland Group plc

The purpose of the Pillar 3 disclosures is to disclose information in accordance with the scope of application of CRD requirements for the Group, particularly covering capital requirements and resources, credit risk, counterparty credit risk, information on securitisation activity, market risk, operational risk, liquidity risk, encumbered / unencumbered assets, leverage ratio and the Group's remuneration disclosures. CRD in the context of this document describes the package CRR as amended, CRD as amended and regulatory and technical standards.

These disclosures represent the annual Pillar 3 disclosures of Bank of Ireland Group plc ('the Group) as at 31 December 2021. They have been prepared in accordance with the requirements of the Capital Requirements Directive & Regulation.

It should be noted that while some quantitative information in this document is based on financial data contained in the Group's Annual Report 31 December 2021, the majority of the quantitative data is sourced from the Group regulatory platform and is calculated according to regulatory requirements.

The difference between the accounting data and information sourced from the Group's regulatory reporting platform is most evident for credit risk disclosures where credit exposure under CRD unlike financial statement information, includes potential future drawings of committed credit lines as well as other technical differences. Pillar 3 quantitative data is thus not always directly comparable with the quantitative data contained in the Group's Annual Report 31 December 2021.

Some details of the key differences between the Group's accounting and regulatory exposures are set out in Table 1.5.

Article 432(1) of the CRR and the EBA Guidelines on Materiality, Proportionality and Confidentiality and on Disclosure Frequency, allow for the omission of certain elements of information from Pillar 3 disclosure on the basis of materiality. As set out in Appendix II - CRR Roadmap, the Group does not disclose information on the following CRR Articles on the basis of materiality: Article 442(e).

The Governor and Company of the Bank of Ireland is availing of the discretion provided for in Article 9 of the CRR to report on an 'individual consolidation' basis which allows for the treatment of certain subsidiaries as if they were, in effect, branches of the parent in their own right.

Frequency

Under the updated CRR, the frequency of disclosures is now determined by the size of institution per Article 433. The Group is classified as a listed "large institution" as it meets certain conditions laid out in Article 4. The Group will disclose the requirements as outlined under Article 433a for a listed large institution and as frequently as required.

Verification

Information which is sourced from the Group's Annual Report 31 December 2021 may be subject to audit by the Group's external auditors and is subject to both internal and external review, along with appropriate governance procedures. The Pillar 3 document is subject to a robust governance process including final approval by the Group Audit Committee (GAC).

Media

Copies of the Group's Pillar 3 Disclosures can be obtained from the Group's website at www.bankofireland.com.

Policy

The Group Audit Committee has approved the Group's Pillar Disclosure Policy which sets out how the Group complies with the Pillar 3 disclosure requirements. The policy sets out the overall approach to disclosure including inter alia frequency and method of disclosure, type of information to be disclosed, data sources and verification of disclosures, as well as setting out internal controls and procedures to be followed.

Attestation by Board member

"I confirm that Bank of Ireland Group's Pillar 3 disclosures for December 2021 to the best of my knowledge, comply with Part Eight of the CRR and have been prepared in accordance with the Group's Pillar 3 Disclosure Policy".

Myles O'Grady

Group Chief Financial Officer

¹ The Group capital ratios have been presented including the retained profit in 2021, availing of the regulatory profit verification process, and the retained loss in 2020

² Total exposure measure reflects the impact of the placing of TLTRO funding with the Central Bank of Ireland (CBI).

³ The Group's Net Stable Funding Ratio (NSFR) from 30 June 2021 onwards is prepared on a regulatory group basis, in accordance with the EU Capital Requirement Regulations and Directive, as amended, which require the maintenance of a NSFR ratio greater than or equal to 100%, effective June 2021.

Key highlights

Bank of Ireland Group plc

Table 1.2 presents the Group's key metrics showing the impact if the IFRS 9 transitional arrangements had not been applied. BOI elected to take advantage of the static and dynamic elements of the transitional capital rules in respect of expected credit losses introduced in 2018. The effect of this is to mitigate the impact on capital in adverse conditions.

¹ The Group capital ratios have been presented including the retained profit in 2021, availing of the regulatory profit verification process, and the retained loss in 2020.

² The Group has not availed of the Article 468 temporary treatment of certain unrealised gains and losses.

The Group's Pillar 3 disclosures are published on a consolidated basis for the year ended 31 December 2021.

Not all legal entities are within the scope of regulatory consolidation. A summarised diagrammatical representation (as at 31 December 2021) of the regulatory consolidation group is illustrated below. The disclosures within this document are based on the regulatory consolidated group, although some additional narrative information relating to the full accounting group (including insurance risks) is also provided. Table 1.3 highlights the main differences between the basis of consolidation for accounting purposes and the CRD regulatory treatment.

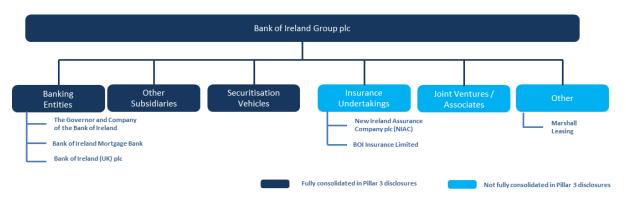

Table 1.3 - Basis of Consolidation

Entity type	Statutory accounting treatment	CRD regulatory treatment
Banking entities	Fully consolidated	Fully consolidated
Other Consolidated Subsidiaries	Fully consolidated	Fully consolidated
Securitisation vehicles ¹	Fully consolidated	Fully consolidated (see Securitisations tab for further details)
Insurance undertakings	Fully consolidated	Significant investments in financial sector entities which are not fully consolidated are subject to the 10%/15% threshold which determines the extent to which these investments are deducted from capital or included in RWA.
Joint ventures / associates	Equity method of accounting or fair value through the P&L	The Group's non-qualifying holdings outside the financial sector in joint ventures and associates are included in RWA.
Other Non-consolidated Subsidiaries	Fully consolidated	These investments are an exposure subject to RWA treatment.

Further information relating to differences in scope of consolidation on an entity by entity basis is contained in Appendix III of this document.

1 Excluding vehicles where the securitisation involves de-recognition of the underlying assets

---------------------	------

The following table provides a reconciliation of the Group's consolidated balance sheet as at 31 December 2021 on an accounting consolidated basis to the Group's consolidated balance sheet under the regulatory scope of consolidation. Certain assets and liabilities can be subject to multiple RWA frameworks.

There is a requirement to disclose any impediment to the prompt transfer of funds within the Group. In respect of the Group's licensed subsidiaries, the Group is obliged to meet certain license conditions in respect of capital and / or liquidity. These requirements may include meeting or exceeding appropriate capital and liquidity ratios and obtaining appropriate regulatory approvals for the transfer of capital or, in certain circumstances, liquidity. The Group's licensed subsidiaries would be unable to remit funds to the parent when to do so void result in such ratios or other regulatory permissions being breached. Apart from this requirement, there is no restriction on the prompt transfer of own funds or the repayment of liabilities between the subsidiary companies and the parent.

Table 1.5 below provides a reconciliation of the consolidated regulatory balance sheet to Exposure At Default (EAD) for items subject to the credit risk, CCR and securitisation frameworks. Certain assets can be subject to multiple RWA frameworks. EAD is the estimated value of the bank's exposure at the moment of the borrower's default determined under regulatory rules.

It should be noted that there are fundamental technical differences in the basis of calculation between financial statement information based on International Financial Reporting Standards (IFRS) accounting standards and regulatory information based on CRD capital adequacy concepts and rules. This is most evident for credit risk disclosures. Credit EAD under the CRD, is defined as the expected amount of EAD and is estimated under specified regulatory rules.

There are two different types of tables included in this document, those compiled based on accounting standards (sourced from the Group's Annual Report 31 December 2021) and those compiled using CRD methodologies. Unless specified otherwise, both sets of data reflect the position as at 31 December 2021. The specific methodology used is indicated before each table where applicable.

Many tables throughout the Group's Pillar 3 disclosures are based on net value under the regulatory scope of consolidation. Net value is the gross carrying value of on and off balance sheet exposures, less allowances / impairments. Table 1.5 - EU LI2 - Reconcilitation between regulatory exposure amounts and carrying value in financial statements

	-	Items subject to				-		Items sub	ject to

Capital

The Group's CET1 capital ratio is 17.02 % at 31 December 2021 (31 December 2020: 14.92%) calculated on a regulatory basis.

Financial Conglomerate

BOIG has been identified and classified as a financial conglomerate comprising of the banking regulatory group and insurance companies (see Tab1.3). In accordance with Article 49 (5) of the CRR, the own funds requirement and capital adequacy ratio of the financial conglomerate calculated on the basis of the Financial Conglomerates Directive are set out below:

Table 1 - EU INS2 - Financial conglomerates information on own funds and capital adequacy ratio

	Dec-21	Dec-20
Supplementary own fund requirements of the financial conglomerate (€m)	7,522	7,594
Capital adequacy ratio of the financial conglomerate (%)	139.59%	124.36%

Table 2 - EU OVC - ICAAP information

The ICAAP process facilitates the Board and senior management in adequately identifying, measuring and monitoring the Group's risk profile to ensure the Group holds sufficient capital (under both Normative and Economic Perspectives) to cover these risks and support its strategy. Underpinning the ICAAP process, the Group prepares detailed financial projections. Under the Normative Perspective, base case projections are prepared using consensus macroeconomic forecasts together with Group-specific assumptions, and the stress case is prepared based on a severe but plausible stress economic scenario. The ICAAP process also assesses the Group's capital adequacy under the Economic Perspective.

Capital Bank of Ireland Group plc

Table 2.1 below summarises the Group's RWAs and minimum capital requirements by risk type. The decrease of €2.0bn in RWA between December 2020 and December 2021 primarily reflects decreases in RWA from capital optimisation initiatives and changes in asset quality being offset by increases from loan book growth and FX movements.

Bank of Ireland Group plc

CRD provides for a countercyclical buffer that could require banks to hold additional CET 1 capital of up to 2.5%. This requirement is expected to be imposed by the designated authority where credit growth is deemed to be excessive and leading to the build-up of system-wide risk. The countercyclical buffer was phased in from 1 January 2016 to 1 January 2019.

The Central Bank of Ireland (CBI) and the Financial Policy Committee (FPC) in the UK reduced CCy8 back to 0% until at least the end of 2022. Table 2.4 below presents the geographical distribution of exposures to the relevant countries and the overall additional capital requirement of €2 million at 31 December 2021 (31 December 2020: €1m).

Table 2.4a - EU CCyB1 - Geographical distribution of credit exposures relevant for the calculation of the countercyclical buffer

Risk management Bank of Ireland Group plc

The Risk Management Report within the Group's Annual Report 31 December 2021 contains significant information on principal risks and uncertainties, the risk management framework, management of key Group risks and capital management.

Guided by the conditions of the Board approved Risk Identity and Risk Appetite, the Group follows an integrated approach to risk management to ensure that all material classes of risk are taken into consideration and that the Group's overall business strategy and remuneration practices are aligned with its risk and capital management strategies.

For further information on the Group's Risk Management Framework and management of key Group risks, please see the following tabs within the disclosures: Risk Management Framework, Business risk, People risk, Strategic risk, Credit risk, Market risk, Operational risk, Funding and liquidity risk, Life insurance risk, Conduct and regulatory risk.

For information on related party transactions please see Appendix V of the disclosures.

Key Prudential and Loan book metrics remain within their limits set by the Board in the Risk Appetite Statement. These key ratios and figures associated with the risk profile are included below:

Risk management Bank of Ireland Group plo

The number of directorships held by members of the Board is listed in the Table 3.2.

Table 3.2 - Number of directorships held by members of the Board

Director	No. of directorships 1
Giles Andrews	8
Evelyn Bourke	6
lan Buchanan	4
Eileen Fitzpatrick	6
Richard Goulding	6
Michele Greene	4
Patrick Kennedy	4
Francesca McDonagh	4
Fiona Muldoon	3
Stephen Pateman	4
Myles O'Grady	4

¹ The table above sets out the number of directorships held by each member of the Board whether the directorship is of a group company or not, whether it is an executive or non-executive directorship, and regardless of whether the directorship is with an entity that pursues or does not pursue a commercial objective.

Board composition in 2021

The composition of the Board remained unchanged in 2021 albeit the performance of Directors, the composition of the Board and the collective suitability of the Directors remains under continuous review. The Group CFO and Executive Director, Myles O'Grady, notified the Board during Q3 2021 of his intention to resign and departs the Group in Q1 2022. On behalf of the Board, I would like to recognise Myles' significant contribution to the Group during his tenure. A successor to the Group CFO has been identified, subject to reculatory approval and will be announced to the market when appropriate.

Myles' departure reflects the increasing risk and likely growing impact on the tenure of executives in financial services arising from the continuing restrictions by the Irish Government on Irish bank boards' autonomy to determine remuneration policies that are appropriate to attract and retain talent and align executives' interests to the long term sustainable success of the bank.

The Nomination, Governance and Responsible Business Committee (NGRB) is responsible for reviewing the composition of the Board and its Committees and assessing whether the balance of skills, experience, knowledge and independence is appropriate to enable them to operate effectively. The composition of the Board remains under continuous review and the NGRB maintains a constant focus on succession planning, to ensure the continuation of a strong and diverse Board and the orderly succession of Board members, which is appropriate to the Group's Purpose and the industry within which it operates.

During 2021, the NGRB commenced a search for a new Independent Non-Executive Director (NED) with an agreed experience, skills and diversity profile, supported by external search consultancy firm Board Works Ltd which provides similar services to the Irish market and as a result has engaged on occasion with firms associated with individual Directors. Board Works Ltd has no other connection with the Company. The primary objective of the search is to facilitate orderly succession of Directors over the coming years.

The Board succession plan, approved in 2021, has identified a number of decisions regarding the tenure of Directors and actions required to ensure the orderly succession of Directors over the coming years, many of which will commence in 2022.

Market experience suggests it is increasingly challenging to identify suitable individuals of high calibre with an interest in taking on a bank board position on the current terms and conditions, due to the level of scrutiny, expectation and risk associated with such positions in the current environment. The imminent introduction of the Senior Executive Accountability Regime in Ireland, whilst welcome in many ways including the clarity it brings in relation to accountability in financial services, is likely to be another barrier to attracting diverse candidates from other industries to bank boards.

Market experience suggests it is increasingly challenging to identify suitable individuals of high calibre with an interest in taking on a bank board position on the current terms and conditions, due to the level of scrutiny, expectation and risk associated with such positions in the current environment. The imminent introduction of the Senior Executive Accountability Regime in Ireland, whilst welcome in many ways including the clarity it brings in relation to accountability in financial services, is likely to be another barrier to attracting diverse candidates from other industries to bank boards.

Diversity

A Board-approved Policy for the Assessment of Directors, which outlines the Board appointment process, is in place and is in accordance with applicable joint guidelines issued by ESMA and the EBA.

The Board is fully committed to diversity in all forms and truly believes that diversity is an essential ingredient of sound decision-making. As of 1 January 2022, the Board comprises 45% female representation. The Board's approach to diversity in all its forms is set out in the Board Diversity Policy, which has retained the specific gender target of maintaining a minimum of 33% female representation on the Board, with a medium term aspiration of achieving broadly equal gender representation on the Board.

The Board is assisted in its risk governance responsibilities by a Board Risk Committee. The Risk Committee met 25 times in 2021, including 6 joint meetings with the Group Audit Committee to consider the impairment charges being applied to the 2020 financial statements and the 30 June 2021 interim financial statements and two joint meetings with the Group Nomination, Governance & Responsible Business Committee to consider ESG matters."

Board responsibility

The Board is responsible for overseeing the Group's risk management and internal control systems, which are designed quality of internal and external reporting and compliance with applicable laws and regulations and to review the effectiveness of same

In establishing and reviewing the risk management and internal control systems, the Directors carried out a robust assessment of the principal risks facing the Group including those that would threaten its business model, future performance, solvency or liquidity, the likelihood of a risk event occurring and the costs of control. The process for identification, evaluation and management of the principal risks faced by the Group is integrated into the Group's overall framework for risk governance. The Group is forward-looking in its risk identification processes to ensure emerging risks are identified. The risk identification, evaluation and management process also identifies whether the controls in place result in an acceptable level of risk. At Group level, a consolidated risk report and risk

appetite dashboard is reviewed and regularly debated by the BRC and the Board to ensure satisfaction with the overall risk profile, risk accountabilities and mitigating actions.

The report and dashboard provide a monthly view of the Group's overall risk profile, key risks and management actions, together with performance against risk appetite and an assessment of emerging risks which could affect the Group's performance over the life of the operating plan.

The Board concluded that the Group's risk management arrangements are adequate to provide assurance that the risk management systems put in place are suitable with regard to the Group's profile and strategy.

Business Risk Bank of Ireland Group plo

Business Risk

Definition:

The risk of earnings volatility over the short term (1 year time frame). This risk will manifest through adverse impact to the strength of the Group's franchise and/or operational economics including volumes, margins, costs, and net worth. It can be driven by sudden shifts in customer behaviour/demand, competitive dynamics, new market entrants, new products, new product pricing, inadequate cost management, and /or an inappropriate concentration of earnings.

Risk management, measurement and reporting

Divisions and business units are responsible for delivery of their business plans and management of such factors as pricing, sales and loan volumes, operating expenses and other factors that may introduce earnings volatility.

Monitoring of business risk is performed on a divisional basis, and measured quarterly, with a scorecard addressing movements in key indicators around income diversification, margin trends, customer advocacy, costs, and employee engagement. In addition to this, business risk is evaluated through quarterly updates in the Board Risk Report which is reviewed by the ERC, the BRC and the Board. Updates on risk dashboards and risk appetite compliance are provided on a monthly basis. The key dimensions evaluated within business risk are:

- •the strength of the Group's returns;
- •ēvaluation of financial projections;
- •strength of the Group's competitive position; and
- •management capability, technology capability and resource availability.

The Group also reviews business risk as part of the annual risk identification process. In addition there is an annual review of business risk to ensure that the BRC is comfortable with the processes in place to manage business risk and that residual risk is within the Group's risk appetite.

Risk mitigation

The Group mitigates business risk through business planning methods, such as the diversification of revenue streams, cost base management and oversight of business plans, which are informed by expectations of the external environment and the Group's strategic priorities.

At an operational level, the Group's annual budget process sets expectation at a business unit level for lending volumes, margins and costs. The tracking of actual and regularly forecasted volumes, margins and costs against budgeted levels is a key financial management process in the mitigation of business risk.

People Risk Bank of Ireland Group plc

People Risk

Definition:

People risks are risks to the Group and its performance relating to the delivery of its strategic objectives which can be attributed to the workforce. Specifically, People risk captures the risk that the Group does not attract and maintain an employee base with the skills, capabilities, and culture necessary to execute the Group's business objectives. People risk also includes risks relating to health and safety. As such, people risks can be categorised in to those relating to Capacity and Capability (including Leadership), Culture and Engagement and Industrial Relations, as well as Health and Safety.

There are a number of drivers of People risk. The economic environment may create uncertainty within the Group and in the wider financial market. The external environment (post-Brexit and reflective of the ongoing COVID-19 situation) and resulting Bol challenges e.g. improving efficiency, may impact the Group's ability to attract, motivate and retain qualified and experienced staff to execute strategy. In this context, People risk may also arise as a result of the Group's transformation and digitalisation as the organisation adapts to the changing needs and preferences of our customer base, with resultant need for staff flexibility and up-skilling alongside transitioning to a sustainable operating model. Associated people risks include impacts on employee engagement and culture embedding, as well as industrial relations risks and business continuity. Furthermore, people risks can be compounded by the continuing impact of remuneration restrictions (e.g. variable pay/bonuses and caps) in a labour market with ongoing high demand for particular skills and / or restricted mobility between jurisdictions.

Risk management, measurement and reporting

The Group believes that good customer outcomes are heavily influenced by good colleague outcomes which can only be delivered by good people risk management. People risk is managed in line with the Group People Risk Framework and associated policies which guide compliance with legal, regulatory and contractual obligations.

The Group acknowledges that a degree of People risk will arise in the operation of its' business activities, with the limit of the Group's appetite for People risk being where the People risk would cause a material detrimental impact on the ability to deliver strategic organisational objectives. On an annual basis, the Board approves the Group Risk Appetite Statement, which incorporates a statement and metrics for people risk. Each component of overall People risk has risk committee reported metrics for which individual risk appetite measures are in place. Regular reporting on people metrics and trends including on colleague health and wellbeing is provided to Senior Management and Board, including inputs to the Board Risk Reporting.

Risk mitigation

The Group mitigates the potential impact of people risk through a number of measures. A suite of policies and Group wide processes are in place to guide compliance with legal, regulatory and contractual obligations. Structured Group wide programmes and strategies are in place to support a number of focus areas, including but not limited to: colleague wellbeing; capability uplift through the professionalisation and enterprise skills agenda; female talent development as well as broader inclusion and diversity initiatives; and Group wide culture and employee engagement plans. A comprehensive colleague communications approach is also in place.

Previous	Index	Next

Strategic Risk Bank of Ireland Group plc

Definition

The risk of inadequate returns over the long term (greater than 1 year). It includes the failure to develop an effective and sustainable long term strategy, inadequate execution of a chosen strategy, or failure to adapt a chosen strategy where fundamental assumptions underpinning the strategy have changed.

Risk management, measurement and reporting

Business, divisional and portfolio strategy is developed within the boundaries of the Group's strategy as well as the Group's Risk Appetite Statement. These strategies are approved by business divisional CEOs and presented to the Board.

Monitoring of strategic risk is performed on a Group and divisional basis, and measured quarterly. Strategic risk focuses on the appropriateness of the Group's strategic plan and financial projections over the longer term and is evaluated through quarterly updates in the Board Risk Report which is reviewed by the ERC, the BRC and the Board. Updates on risk dashboards are provided on a monthly basis.

On an annual basis the Group reviews strategic risk as part of the risk identification process. In addition the annual review and challenge of strategic risk presented to BRC to ensure the Group is comfortable with the processes in place to manage strategic risk and that residual risk is within the Group's risk appetite.

Risk mitigation

The Group mitigates strategic risk through regular updates to the Board on industry developments, the macroeconomic environment and associated trends which may impact the Group's activities, review of the competitive environment and strategies at a divisional and business unit level.

Life insurance risk Bank of Ireland Group plo

Life insurance risk:

Definition (audited)

Life insurance risk is the risk of unexpected variation in the amount and timing of claims associated with insurance benefits. This variation, arising from changing customer mortality, life expectancy, health or behaviour characteristics, may be short or long term in nature. The sub-categories of life insurance risk such as mortality, longevity and persistency risk each relate to different sources of loss which arise as a result of writing life insurance business.

Risk management (audited)

Life insurance risk is underwritten and managed by NIAC, a wholly owned subsidiary of the Group. The management of insurance risk is the responsibility of the board of NIAC which is delegated through internal governance structures. Aggregate life insurance risk exposure and exposure to the sub-categories of life insurance risk are monitored through a suite of management reporting metrics.

The risks that arise as a result of writing life insurance business are also managed by a number of governance fora as well as senior management. The minimum standards required when managing these risks are set out in a suite of NIAC board approved policies.

The Group transfers some life insurance risk to reinsurance companies who then meet an agreed share of the claims that arise on a book of business in return for a premium. This creates a credit exposure to these reinsurance companies which is managed within the NIAC risk management framework with responsibilities delegated through the Reinsurance Risk Policy. A review of the panel of reinsurers that may be used and the structure of reinsurance arrangements is carried out at least annually. Senior members of the management team with actuarial and underwriting expertise contribute to the effective oversight of this risk.

Risk measurement (audited)

Risk experience is monitored regularly with actual claims experience being compared to the underlying risk assumptions. The results of this analysis are used to inform management of the appropriateness of those assumptions for use in pricing, capital management and new product design.

Exposure to life insurance risk is measured by means of sensitivity and scenario testing. Risk capital is calculated for each individual risk type by stressing the best estimate assumptions of future experience by extreme, but plausible, factors. The stress factors are pre-defined by regulation and are set at a level with an expected frequency of occurrence of one year in every 200. NIAC also carries out an ORSA annually which is overseen by the NIAC board. Within the ORSA, NIAC's risk profile is considered, both quantitatively and qualitatively, in a holistic manner with potential areas of risk identified along with conclusions in respect of how those risks will be mitigated.

Risk mitigation (audited)

The Group mitigates the potential impact of insurance risk through a number of measures. Capital is held against exposure to life insurance risk. Exposure to risk is also managed and controlled by the use of medical and financial underwriting, risk mitigating contract design features and reinsurance, as detailed in risk management policies.

Risk reporting (audited)

An update on the status of life insurance risk is included in the Board Risk Report on a quarterly basis. Updates on risk dashboards and risk appetite compliance are included in the Board Risk Report on a monthly basis. NIAC's ORSA report in respect of the NIAC annual assessment is also presented to the ERC on an annual basis.

Conduct and regulatory risk

Bank of Ireland Group plc

Conduct and regulatory risk:

Definition

Conduct and regulatory risk is defined as the risk that the Group, and/or its staff, conduct business in an inappropriate or negligent manner that leads to adverse customer outcomes and/or non-compliance with laws, rules and regulations related o Conduct of Business, Data Protection and Financial Crime. It is also the risk of the failure to appropriately identify and implement governance arrangements for compliance with any new laws, rules and regulations that relate to licensed financial services activity. Conduct and Regulatory risk is categorised as a non-financial risk within the Bank's Group Risk Framework and is further broken down into distinct risk categories:

Customer-focused strategy: The risk of not delivering fair outcomes to customers. It also covers those laws, regulations, codes and guidelines that govern the activities of the Group with regard to consumer protection requirements, advertising and marketing compliance, mortgage arrears and lending codes. This also includes regulatory expectations with regard to the delivery or good/fair customer outcomes laid out in formal industry communications such as Dear CEO letters

Product and Service Governance Lifecycle Management: The risk of the design and development of products and services that do not continue to be appropriate and suitable over the lifetime of the product or respond to changing customer needs. It also covers those laws, regulations, codes and guidelines that govern the activities of the Group with regard to product and services design, development, oversight and governance.

Colleague Compliance and Culture: The risk of colleagues not meeting set regulatory compliance standards as well as standards of behaviour that have a material negative outcome for stakeholders including customers, colleagues and communities (including shareholders, suppliers and regulators). It also covers the Group's Individual Accountability Framework and Accountability Risk as well as those laws, regulations, codes and guidelines that govern the activities of the Group with regard to conduct and other standards required of individuals and the business.

Regulatory Compliance: The risk of failure by the Group to implement effective governance in respect of regulatory change, as well as failure to appropriately manage our regulatory engagements or to comply with conduct of business laws, regulations, codes and guidelines.

Data Protection and Privacy. The risk of failing to comply with data protection and privacy principles and requirements and/or protect the personal data of our customers, employees and other individuals who allow the bank to process their personal data. It covers laws, regulations and guidelines relating data protection and privacy within all jurisdictions the Group operates.

Financial Crime: The risk that the measures adopted by the Group to prevent and detect money laundering, terrorist financing, sanctions evasion or fraud are not effective and/or do not meet regulator expectations. It also covers those laws and regulations that require the bank to design and manage processes to identify, assess, mitigate and report on AML, CFT and FS risks and to ensure that staff are aware of those laws and ensure they are alert to those risks when required to do so.

Risk management and measurement

The Group Risk Framework identifies the Group's formal governance process around risk, including its framework for setting risk appetite and is implemented by accountable executives and monitored by the GRCRC, the ERC, the BRC and Board, in line with the overall Group risk governance structure.

The Conduct and Regulatory Risk Framework (CRRF), which sits below the overarching Group Risk Framework, sets out the structures and methodologies by which the Group identifies and manages conduct and regulatory risk. There are two components within the Framework:

- •Governance and Oversight: Governance arrangements and management oversight of Conduct and Regulatory risk, including specific roles and responsibilities across three lines of defence.
- •Risk Management Lifecycle: The conduct and regulatory risk management lifecycle recognises the importance of regular risk identification and assessment, diligently setting risk appetite and having robust measurement in place to monitor and report against this.

The effective management of conduct and regulatory risk is primarily the responsibility of business management and is supported by Group Compliance. On an annual basis, the Board approves the Group Risk Appetite Statement, which incorporates statements for all material risks, including conduct and regulatory

Risk mitigation

The primary risk mitigants for conduct and regulatory risk are the suite of policies and policy standards and the existence of appropriate controls in place throughout the business. The Group Conduct and Regulatory Risk Framework and associated policies / policy standards set out the minimum requirements for the effective management of Conduct and Regulatory Risk to ensure that the Group's overall exposure remains within the Board's approved risk appetite. The Group also mitigates Conduct and Regulatory Risk through the early identification, appropriate assessment, measurement and reporting of risks.

Risk reporting

The current status of conduct and regulatory risk is reported to the ERC and the Board members through a variety of forms including the Group Chief Compliance Officer Report and Board Risk Report on a quarterly basis. Monthly updates on the conduct and regulatory risk profile are provided to GRCRC. The GRCRC oversees the status of conduct and regulatory risk in the Group, including the progress of associated risk mitigation initiatives, issues and breaches, and significant regulatory interactions on a monthly basis.

Introduction

Under the standardised approach, risk weightings for rated counterparties are determined on the basis of the external credit rating assigned to the counterparty. For non-rated counterparties and certain other types of exposure, regulatory-determined standardised risk weightings are used.

Exposures rated under the standardised approach amount to €61,132 million (2020: € 41,912 million). The exposure value is presented before credit risk mitigation ("CRM") and credit conversion factors ("CCF") and after credit impairment provisions but excluding counterparty credit risk exposures and securitisations.

Use of external credit ratings

Under CRD, institutions are permitted to determine the risk weight of an exposure with reference to the credit assessments of external credit assessment institutions ("ECAIs").

Risk weights are set out according to each exposure class. In many classes, risk weights are also determined by the credit quality of the exposure, with reference to the credit assessment of External Credit Assessment Institutions (ECAIs).

ECAI are used for the following standardised exposure classes:

- Exposures to central governments or central banks;
- Exposures to regional governments or local authorities;
- Exposures to public sector entities;
- · Exposures to multilateral development banks; and
- Exposures to international organisations.

The Group uses external ratings provided by the ECAIs: Fitch Ratings, Moody's Investors Service and Standard & Poor's.

ECAI ratings are mapped to risk buckets or 'credit quality steps' in accordance with EU commission implementing regulations.

Risk weights are set out in CRR tables according to these credit quality steps.

Table 4.1 presents the credit risk standardised exposures by exposure classes on two different basis (before credit conversion factor (CCF) and credit risk mitigation (CRM) and after CCF and CRM).

The Standardised approach applies where exposures do not qualify for use of the IRB approach and / or where an exemption from IRB has been granted. It is less sophisticated than the IRB approach for regulatory capital calculations. Under this approach, credit risk is measured by applying risk weights outlined in CRD based on the exposure class to which the exposure is allocated. The following tables outline the credit risk Standardised exposure classes by the prescribed risk weight.

Table 4.2 - EU CR5 - Standardised approach by exposure class

1 Exposures for which a credit assessment by a nominated ECAI is not applied or where a specific risk weight is applied depending on the nature of the exposure

IRB approach Bank of Ireland Group plc

The Group has adopted the Foundation IRB approach for its non-retail exposures (eight Probability of Default (PD) models) and the Advanced IRB approach (twenty six models in total including EAD, LGD and PD) for the majority of its retail exposures. Exposures for which capital requirements continue to be determined under the Standardised approach include sovereign and multilateral development bank exposures, the Group's land and development exposures, certain asset finance and leasing portfolios, non-credit obligation assets and other corporate exposures for which regulatory approval to use the IRB approach is not held.

Relationship of PD grades with external ratings

The table below illustrates the relationship between PD grade, PD band and S&P type ratings. PD is used in the IRB RWA calculation and can be mapped to Group-level PD grades based on PD bands. These PD grades differ from internal obligor grades which are used in arriving at IFRS classifications, however there is a defined relationship between both sets of grades.

Note the internal ranges do not map directly to the prescribed ranges used in tables 4.3 and 4.4.

PD Grades	PD Scale	S&P type ratings
1-4	0% <= PD < 0.26%	AAA, AA+, AA, AA-, A+, A, A-, BBB+, BBB
5-7	0.26% <= PD < 1.45%	BBB-, BB+, BB, BB-
8-9	1.45% <= PD < 3.60%	B+
10-11	3.60% <= PD < 100%	B, Below B
12	100%	n/a

The internal ratings process by exposure class

Details on how the internal ratings process is applied to each individual IRB exposure class are given below. Departures from Group standards outlined above are not permitted.

Corporates

Corporate entities, including certain SME and specialised lending exposures are rated using a number of models. This suite of models typically incorporates scorecard-based calibrated PD outputs (both TtC and cyclical PD estimates). The Group does not rate purchased corporate receivables under the IRB approach. Information on the Corporates Foundation IRB exposure class is provided in Table 4.3.

Institutions

Institutions are rated by a single dedicated model. This is an internally-built scorecard and the output from this model is a single PD estimate that is fully TtC. Information on the Institutions Foundation IRB exposure class is provided in Table 4.3.

Retail

Retail exposures including Mortgages, Qualifying Revolving Retail Exposures (QRRE) and certain Retail SME and Consumer loans are rated on a number of models based on application and behavioural data which is calibrated to a PD. This PD estimate typically varies with the economic cycle. The Group also generates LGD and CCF estimates for its retail exposures. These estimates are calibrated to produce estimates representative of an economic downturn. Information on the Retail IRB exposure classes is provided in Table 4.4.

Securitisations

Capital requirements for securitisation positions (retained and purchased) are determined under the IRB approach. These are dealt within the Securitisation section.

Analysis of credit risk IRB annroach Bank of treland (

Table 4.3 shows the breakdown of the credit risk Foundation IRB exposure classes split by PD range.

The table below represents the movements of the key drivers in the credit risk IRB RWAs in the period by risk type.

Table 4.7 - EU CR8 - RWEA flow statements of credit risk exposures under the IRB approach

Dec-21	€m
Risk weighted exposure amount as at the end of the previous reporting period - September '21	30,508
	•
Asset size (+/-) ¹	(387)
Asset quality (+/-) ²	(64)
Model updates (+/-) ³	-
Methodology and policy (+/-) ⁴	-
Acquisitions and disposals (+/-) ⁵	-
Foreign exchange movements (+/-)	230
Other (+/-) ⁶	(2,884)
Risk weighted exposure amount as at the end of the reporting	
period - December '21	27,403

- 1 Asset size: This represents movements in RWA driven by changes in the composition of the Group's existing portfolios. This includes, but is not limited to: constant currency growth in existing portfolios including new business and repayment of loans, changes in the product mix.
- 2 Asset quality: This can represent movements in RWA including but not limited to: PD Migration and LGD changes driven by economic conditions, changes in lending practices, demographics and model recalibrations and re-anchoring.
- 3 Model updates: This can represent movements in RWA including, but is not limited to: new model approvals, refinements and enhancements to improve model performance.
- ${\it 4~Methodology~and~policy: Updates~to~the~RWA~calculation~methodology,~communicated~by~the~Regulator.}\\$
- 5 Acquisitions and disposals: This can represent movements in RWA due to changes in book sizes as a result of acquisitions and/or disposals.
- 6 Other comprises movements in non-credit RWA items and unconsolidated intragroup investments.

Table 4.8 presents the scope of the use of IRB and SA approaches.

Credit risk mitigation Bank of Ireland Group plc

Table 4.20 shows the volume of unsecured and secured exposures. Secured exposures are limited to those exposures against which eligible collateral which meets CRR definitions is held and has been used in the calculation of the Group's capital requirements. Haircuts are applied consistent with CRR requirements.

This table is not reflective of the total volume of exposures against which collateral and guarantees are actually held across the Group, nor does it reflect the full range of credit risk mitigation taken. A significant portion of the exposures included in Table 4.20 (exposures unsecured carrying amount) benefit from security taken to mitigate credit risk, but this security is not eligible for use in the regulatory capital calculations. For example, exposures in the Group's leasing business are included as unsecured exposures in the table, although the underlying assets financed are held to mitigate credit risk in this business.

The table excludes exposures where the Group nets derivative mark-to-market positions with certain interbank counterparties against cash collateral placed and received with those counterparties under CSA agreements. For cash collateral held against derivative exposures refer to the counterparty credit risk section.

Debt securities are included in the relevant exposure classes in the table. Credit risk mitigation realised through the netting of on-balance sheet assets and liabilities is not reflected in the table. Certain customer loans and overdrafts are netted against deposits as permitted by the CRR subject to certain criteria including a legal right of offset. Effectiveness of netting techniques is achieved through the execution of industry standard legal agreements.

Limits, policies and collateral

Limits

Counterparty credit limits are based primarily on the counterparty credit rating but also take into account historic limit usage and requirements from the business. The capital calculation uses PDs assigned to counterparties based on their ratings and the PDs are then used to calculate RWA and EL.

Policies

Policies are in place for securing collateral and establishing credit reserves. Legal agreements giving effect to netting International Swaps and Derivatives Association (ISDA) and / or collateral arrangements (Global Master Repurchase Agreement (GMRA), Credit Support Annex (CSA) and Cleared Derivatives Execution Agreements (CDEAs)) are negotiated and put in place with interbank and other counterparties. In relation to CSA's BOI calculate variation and initial margin on a daily basis. Variation margins are agreed with the counterparty daily and settled as cash. Initial Margin on the cleared derivative portfolio is settled as bonds pledged. The calculation of initial margin on the bi- lateral portfolio came into scope in 2020. To date no bonds pledged have been required on the bi lateral portfolio, as thresholds have not been reached.

Wrong-way risk

The Group recognises the potential for 'wrong-way' exposure in derivatives rewriting risk. This occurs where the potential market-driven exposure on the contract is likely to be positively correlated with the counterparty because both are linked to a common factor such as a commodity price or an exchange rate. The Group allows for the potential impact of wrong-way exposure qualitatively in assessing individual credits.

Collateral

As at 31 December 2020, a two-notch downgrade of the Group by either S&P or Moody's on the Group's CSAs covering its interbank derivative positions will have little impact. Legally the Group is not required to post additional collateral in respect of its existing trades. Under EMIR requirements, threshold amounts can no longer be included in CSAs for over-the- counter (OTC) derivative transactions entered into on or after 1 March 2017

European Markets Infrastructure Regulation (EMIR)

EMIR includes the obligation to centrally clear certain classes of OTC derivative contracts through Central Counterparty Clearing (CCPs). The CCP is a regulated financial institution that takes on counterparty credit risk between financial parties. The Group began clearing OTC interest rate swaps and Index referenced CDS (Credit Default Swaps) in 2016 to meet this obligation.

Exposure value measure

The Group determines exposure values for counterparty credit risk using the Standardised Approach (SA-CCR). This covers derivative exposures. The Group determines exposure values for repurchase transactions using the Financial Collateral Comprehensive Method (FCCM).

In determining the EAD for derivative credit exposure, the Group recognises the credit risk mitigating impact of cash collateral received under CSAs. EAD for particular netting sets is reduced by the amount of cash collateral held in accordance with the relevant specific regulatory rules. Separately, where the Group posts collateral under a CSA, the net negative mark-to-market on the related netting set is used to reduce the EAD on the collateral exposure, once again in accordance with the relevant specific regulatory rules.

Securitisation Bank of Ireland Gro

Description of securitisation and re-securitisation activities:

The Group has acted as originator under a number of securitisation structures, both traditional and synthetic. The purpose of these securitisations is typically to diversify the sources of funding for the Group or to transfer credit risk. Information on the exposures securitised under these transactions, and which qualify for Pillar 1 derecognition, are provided in the tables in this Annex.

The Group has also purchased positions in securitisation transactions. These positions have been purchased in transactions where the individual notes were originally highly rated and benefited from strong credit enhancement provided by lower ranking notes. The purchased positions cover a broad range of asset classes including Commercial Mortgage-Backed Securities (CMBS), Residential Mortgage-Backed Securities (RMBS), consumer loans and loans to Corporates/ SMEs.

In addition, the Group has transacted internal securitisations for funding purposes. These do not qualify for derecognition under Pillar 1 and the exposures securitised under them are included in the credit risk tables in this document. These securitisations are outside the scope of this section.

The Group has not acted as a sponsor in any securitisation transactions.

None of the Group's originated or purchased securitisation positions qualify for STS.

The type of risk activities:

For synthetic securitisations, the Group always retains the senior securitisation positions. With the exception of one recent synthetic transaction, the Group also retains the first loss securitisation positions.

For traditional securitisations, the Group retains 5% of each of the issued notes or as single vertical risk retention tranche.

For purchased securitisations, the Group has invested in [I] securitisations positions.

None of the Group's originated or purchased securitisation positions qualify for STS.

Calculation of risk weighted exposure amounts:

At 31 December 2021, the Group's securitisation positions were risk weighted in accordance to the hierarchy of approaches set out in Article 254 of the CRR. For the Group's synthetic securitisations, the SEC-IRBA method was used to risk weight the securitisation positions with the retained junior positions deducted fully from CET1. The Group has recognised significant credit risk transfer for these transactions pursuant to Article 245 (2) of the CRR.

The risk weighted exposure amounts for the Group's purchased positions are calculated using the SEC-ERBA approach. The Group's purchased positions are all held in the Banking Book. A supervisory deduction is taken from CET1 for purchased positions which otherwise would have attracted a 1250% risk.

None of the Group's originated or purchased securitisation positions qualify for STS.

Listing of SSPEs:

- (i) SSPEs which acquire exposures originated by the institutions; Mulcair Securities DAC; Mulcair Securities No.2 DAC; Bowbell No.2 plc
- (ii) SSPEs sponsored by the institutions; n/a
- (iii) SSPEs and other legal entities for which the institutions provide securitisation-related services, such as advisory, asset servicing or management services Mulcair Securities DAC; Mulcair Securities No.2 DAC; Bowbell No.2 plc
- (iv) SSPEs included in the institutions' regulatory scope of consolidation; Bowbell No.2 plc; Mespil Securities DAC; Vale Securities Finance DAC; Glen Securities Finance DAC; Mespil Securities No.2 DAC

Accounting policies for securitisation activity:

Securitisations generally require Group companies to enter into transactions with a Structured Entity (SE). From an accounting perspective, the treatment of SEs is assessed in accordance with IFRS 10 which establishes the principles for when the Group is deemed to control another entity and therefore required to consolidate it through the Group's financial statements.

An SE is an entity that has been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity, such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. The Group assesses whether it has power over the relevant activities in assessing control over such an entity by considering factors such as who manages the assets of these entities and whether the Group has lending to, or a residual interest in such entities.

Where the Group acts as originator in a securitisation, all financial assets continue to be held on the Group balance sheet, and a liability is recognised for the proceeds of the funding transaction, unless:

- the contractual rights to the cash flows have expired; or
- the financial assets have been transferred and the Group has transferred the contractual right to receive the cash flows of the financial asset or assumes a contractual obligation to pay the cash flows of the financial asset only where it collects equivalent amounts from the original asset, such amount are remitted without material delay and the Group is prohibited from selling or pledging the original asset other than as security.

Where any of the above conditions apply to a fully proportionate share of all or specifically identified cash flows, the relevant accounting treatment is applied to that proportion of the asset.

Use of External Credit Assessment Institutions (ECAIs):

For the purpose of the RWA calculation, ECAIs are used for the Group's purchased securitisation positions. The following ECAIs are used: Fitch Ratings, Moody's Investors Service and Standard & Poor's. These are used for all exposure types, though the securitisations may not have been rated by all three agencies.

The Group's purchased positions are classified as either other financial assets at fair value through profit or loss or loans and receivables from an accounting perspective.

There is no change to the accounting treatment of assets securitised in originated securitisations or purchased securitisations from the previous reporting period.

The Group has no assets awaiting securitisation at 31 December 2021.

----------	------

Definition and background (audited) Market risk is the risk of loss arising from move

ted) g from movements in interest rates, FX rates or other market prices. Market risk arises from the structure of the bal pnary risk-laking. The Group recognises that the effective management of market risk is essential to the maintenanchoider value and the achievement of the Group's strategic objectives.

Risk management, measurement and reporting (subtled)
The management of market disk in the Group is operand by the Group's Risk Appetite Statement and by the Group Policy on Market Risk, both of which are app by the Board. These are supplemented by a marge of ALCO approved limits and controls. The Group has an established governance structure for market risk that involves the Board, it is risk committees (RISC and ERC), and ALCO, which has primary responsibility for the oversight of market risk in the Group.

The Board monitors adherence to market risk appetite through the monthly Board Risk Report

Group Market & Liquidity Risk (GM&LR) provides second line oversight of the Group's exposure to market risk, ensuring that the Group correctly identifies and assesses the market risks to which it is exposed. GM&LR is a part of the Group Risk Function reporting to the Group CRO.

It is Group policy to minimise exposure to market risk, subject to defined limits for discretionary risk. Nonetheless, certain structural market risks remain and, in some cases, are difficult to eliminate fully. In addition, the Group bears economic exposure to adverse movements in the credit spreads of bornds held as liquid assets in the New Teland It de assurance business (NIAC). The latter is the precionmant economic exposure arising on the NIAC fixed interest

Market risks that arise are transferred to and managed by Bank of Ireland Global Markets (BolGM), the treasury execution arm of the Group. These market risks are hedged by BolGM as a matter of course with the external market or, in the case of a small quantum of the risks concerned, are run as short-lerm discribionary risk positions subject to policy and inline. Solzerdenary insk-taking is confined to inventeer star is risk (including inflations expount); FX risk and traded credit risk.

Similarly, market risks in the Group's life assurance business, NIAC, are managed within defined tolerances. However, certain residual risks are inherent in this business, notably exposure to read is preads on assets held to match policyholder labilities, and indirect exposure to equity markets through changes in the disc value of fees applied to equity assets held by policyholders in insurance contracts. This is outlined in greater detail below.

Classification of market risk (unaudited)
In accordance with Group policy and aligned with regulatory requirements and guidance the Group classifies market risk as follows:

"bitners thate Risk in the Banking Book." This is interest rate risk that arises naturally through the conduct of retail and wholesale banking business. This is broken
down intor reprincing risk, yeld curve risk, basis risk and optionality risk. It also includes earnings risk arising from non-interest bearing, floored or perpetually fixed
assets and liabilities.

down into re-proficing inset, preserve user visions, and asserts and faultiful into the profit of the profit of the positions that are pro-actively assumed and which are booked in the Trading Book in compliance with the CRR.

Other market-related risks to earnings and or capital: Risks to earnings and or capital that do not fall instantally within the regulatory-defined categories of Trading Book and RRBS list under this heading. For the most part, these risks reflect the application of market-market caparating to particular profitions or the impact of Kr rate movements on what is a dual-currency balance sheet. The most material risks arise from the fair valuation of credit risk in securities portfolios and derivative

Balance sheet linkage (sudited)
The principal risk factors which she're changes in sarrings or value in relation to each line item are also outlined. Trading Book assets and liabilities were a small proportion of the balance sheet at 31 December 2021 and this is representative of the position throughout the year, interest rates are the most significant risk factor.

Discretionary market risk (audited)
Discretionary risk is a risk that is carried in the expectation of gain from near-term movements in liquid financial markets. BolGM is the sole Group business unit permitted to run descretionary market risk.

Discretionary risk can be taken by leaving naturally arising retail or wholesale generated risks unhedged for a period (discretionary IRRBB) or by taking proprietary positions in the market (Trading Book risk). In conformity with the CRR, customer derivatives are booked in the Trading Book and can be a source of trading risk if not fully closed out.

Discretionary market risk is subject to strict controls which set out the markets and instruments in which risk can be assumed, the types of positions which can I taken and the limits which must be complied with. BodGMs discretionary market risk is confirred to interest rate risk (including inflation exposure); XT risk and pasted appours. A limit on discretionary risk and a high-test laptop loss are set in the Risk Appetite Gastenent approved by the Board. The Croup does not seek generate a material proportion of its earnings through discretionary risk-taking and it has a low tolerance for earnings violatility airsing from this activity which is reflected in policy, limits and other controls applied.

The Group employs a VaiR approach to measure, and set limits on, discretionary market risk whether taken in the Banking Book (discretionary IRRBB) or pro-acti assumed in the Trading Book. The Group utilises a monte-cardo simulation model approach for the calculation of the interest rate into knowponent and a parametr VAIR approach to the PK, inflation and crede that knowponents at a 95% (two taked) confidence level, using a one day holding period and based one one year of his VAIR approach to the PK, inflation and crede that knowponents at a 95% (two taked) confidence level, using a one day holding period and has lone one year of his more weight to recent data and responds quickly to changes in market volatility. VaR is backeteted and reported on a daily basis with all exceptions subject treview and explanation.

The Group uses VaR to allocate capital to discretionary trading book risk in its ICAAP but uses the standardised approach (TSA) for Pillar 1 Trading Book ca

The Group recognises that VaR is subject to certain inherent limitations and therefore VaR limits are supplemented by scenario-based stress tests. These are particularly important in periods of low market violatility when VaR numbers can understate the risks of loss from large adverse market moves. Position limits and 'stop losses' are also a certar alterient of the control environment of certain certai

Total VaR is the sum of overall interest rate, FX and traded credit VaR. Overall Interest Rate VaR is a correlated measure of trading book interest rate and discretionary IRRBB.

Structural and other risks (audited)
Notwithstanding the overriding objective of running minimal levels of market risk, certain structural market risks remain and are managed centrally as part of the

Credit spread risk (unaudited).
Credit spread risk (unaudited).
Credit spread risk wires from the potential impact of changes to the spread between the bond yield and away rates. Bonds purchased primarily as liquid assets and classified as fair value on the balance sheet and as such, movements in the credit spreads can result in adverse impacts on the fair value of these holdings. At 31 December 2021, the Group held £9.5 tillion in securities classified as FVOCI (2020: 10.9 billion). A 14 is increase in the average credit spread of the book in 2021 would have reculed its value by 640-million (2020: 640-million).

An analogous economic risk exists in relation to securities held by NNAC to match policyholder liabilities and to invest its capital. At 31 December 2021, NNAC's bond portfolio had a market value of €1.5 billion (2020: €1.6 billion), At 31 December 2021, a 1% widening of all credit spreads (measured as bond yields minus the corresponding way not yould have had an impact on earnings of €1.09 million megative, while a 1% tightening would have had a positive impact of €1.25 million (2020: €1.22 million (2020: €

The Group also models the spread risk for both the FVOCI and NIAC portfolios over a one-year horizon using a delta-normal VaR model and deterministic spread stress model respectively. They approximate a potential one-year loss in portfolio value due to changes in credit spreads.

Equity risk (unaudited)

Multiprisk (unaudited)

Multi

ructural FX (unaudited)

6 Group delines structural FX risk as the exposure of its key capital ratios to changes in exchange rates. Changes in exchange rates can increase or decrease the enter law capital even devided in tell of RWAs. It is Group policy to manage structural FX risk by ensuring that the currency composition of its RWAs and its structural net asset attion by currency are broadly similar. This is designed to minimise the impact of exchange rate movements on the principal capital ratios.

At 31 December 2021, the estimated sensitivity of the Group's fully loaded CET1 ratio to a combined 10% movement of sterling and dollar combined against the euro

Use of derivatives in the management of market risk (audited)
The activities set out above involve, in many instances, transactions in a range of derivative instruments. The Group makes extensive use of derivatives to hedge its balance sheet, extensive its customer needs and, to a lesser settent, assume discretionary risk. The Group's participation in derivatives markets is subject to policy approved by the ALCO. The Group makes a clear distinction between derivatives which must be transacted on a perfectly hedged basis and those whose risks can be managed within broader interest rate or FX bods.

Discretionary market risk can only be assumed in clearly defined categories of derivatives which are traded in well-established liquid markets, supported by industry standard conventions and documentation and valued in accordance with generally accepted methods.

The approach to hedging and managing market risk is governed by policies explicitly designed to ensure that all hedging activities are risk reducing. Interest rate risk arising on customer lending and term deposit-taking is centralised by way of internal hedging transactions with BolGM. This exposure is, in turn, substantially eliminated by Bold through external hedges.

Structural risk is managed by way of selective and strategic hedging initiatives which are executed under ALCO's authority

Policy requires that, where behavioural optionality hedging relies on assumptions about uncertain customer behaviour and where material, it is subject to limits or other

Market risk

The Group uses the Standardised approach for its assessment of Pillar 1 capital requirements for trading book market risk, using the prescribed regulatory calculation method. Risk weighted assets for market risk arise predominantly from interest rate risk on the trading book and foreign exchange risk.

Interest Rate Risk in the Banking Book (IRRBB)

Interest Rate Risk in the Banking Book (IRRBB)

Non-trading interest rate risk or Interest Rate Risk in the Banking Book refers to the risk to earnings and capital naturally arising through the conduct of retail and wholesale banking business as the various balance sheets components have different maturities, interest rate basis or behavioural attributes. The Group distinguishes between structural IRRBB and discretionary IRRBB. Structural IRRBB is the inherent risk of a bank's balance sheet which can be mitigated but not fully eliminated. Discretionary IRRBB is Banking Book risk which is run in the expectation of a favourable movement in interest rates and can be closed out in liquid markets. The Group's IRRBB is defined and measured in a manner that is consistent with regulatory definition and guidelines and is in line with the Group's Risk Appetite, which is approved by the Board at least annually. The Board defines its appetite for IRRBB risk through the setting of limits and other controls. Additionally, Board approved limits are supplemented by ALCO approved limits and controls.

IRRBB is based on a three lines of defence model, in line with the Group-wide approach to risk management.

First line of defence functions are responsible for management of structural interest rate risk, structural basis risk and discretionary interest rate risk and bear the primary responsibility for protecting the Group from market risk-related losses. First line functions are Group Treasury and Bol Global Markets.

Second line of defence function for IRRBB is carried out by Group Market and Liquidity Risk (GMLR) as part of Group Risk. GMLR's primary responsibility is to identify, understand, measure and manage IRRBB to which the Group is exposed. Additionally it operates an effective monitoring, reporting and control framework.

Group Internal Audit provides an independent, reasonable assurance to key stakeholders on the effectiveness of the Group's risk management and internal control framework.

Group Asset and Liability Committee ("ALCo)" is charged with the oversight of market risk, including IRRBB, and has appointed and delegated to the Balance Sheet Structural Risk Committee ("BSSRC") and Group Treasurer.

The main focus for Structural hedges is to manage Earnings Risk on Non-Interest Bearing Liabilities, Earnings Risk on Low-Rate Sensitive Deposits and Market Basis Risk.

IRRBB Measurement

Economic value of Equity (EVE) measures changes in the net present value of interest rate sensitive instruments over their remaining life resulting from interest rate movements.

Net Interest Income sensitivity measures the impact on earnings from interest sensitive assets and liabilities due to a sudden change in interest rates. This is measured on quarterly basis in accordance with article 448(b). An internal 100bp static balance sheet NII sensitivity model is also performed on a monthly basis.

Discretionary IRRBB risk is measured and controlled using a 1 day, 99.0% VaR approach, calculated on a daily basis by Global Markets Market Risk.

Basis risk, defined as the spread between swap risk of different tenor and cross-currency basis. Nominal basis exposures are calculated by Group Market Risk and Liquidity on a monthly basis. Basis Risk must be removed, as far as practicable, from individual books and balance sheets, and centralised in a structural basis book which is managed by Global Markets on behalf of Group Treasury.

The following scenarios are used to measure economic value and/or net interest income:

- Parallel shock up +200bps / Parallel shock down -200bps

The following SOT scenarios are used to measure the economic value of equity:

- Parallel shock up / Parallel shock down
- Steepener (short rates down and long rates up) / Flattener (short rates up and long rates down)
- Short rates up / Short rates down

The following scenarios are used to measure net interest income:

- Parallel shock up +100bps
- Parallel shock down -100bps

The Groups internal Net Interest Income scenarios assume a static balance sheet over 1-year horizon.

For the purpose of the EU IRRBB1 template (see Tab 7.2), the below modelling parameters are assumed:

EVE SOT metrics in the following table are calculated in accordance with EBA regulatory guidelines.

Structural Interest Rate Risk

Structural Interest Rate Risk is predominantly the exposure of Group earnings to interest rate changes arising from the presence of non-interest bearing or behaviourally fixed-rate assets and liabilities on the balance sheet. The principal non-interest bearing liabilities are equity and non-interest bearing current accounts. It is Group policy to invest its net non-interest bearing liabilities (or Free Funds) in a portfolio of swaps with an average life of 3.5 years and a maximum life of 7 years. This has the effect of helping to mitigate the impact of the interest rate changes on interest income.

The Economic Value of Equity (EVE) measures the changes in the net present value of interest rate sensitive instruments over their remaining life.

In the EVE metrics the equity is excluded from the cash flows as it is treated as an overnight maturing item. EVE is calculated under the regulatory EBA prescribed scenarios and uses standard key modelling and parametric assumptions set by regulatory guidelines. Table 7.2 below outlines the changes in the economic value of equity in the period.

Table 7.2 - EU IRRBB1 - Interest rate risks of non-trading book activities

	Supervisory shock scenarios	Changes of the Economic Value of Equity
	Dec-21	€m
1	Parallel up	(371)
2	Parallel down	113
3	Steepener	(0.1)
4	Flattener	(102)
5	Short rates up	(216)
6	Short rates down	73

Changes of the Net Interest Income analysis

Estimated Sensitivity of Group

The Group uses net interest income sensitivity analysis to measure the responsiveness of earnings to scenarios for short and long-term rates. The following table shows the estimated sensitivity of the Group's net interest income (before tax) to an instantaneous and sustained 1% parallel movement in interest rates. The estimates are based on management assumptions primarily related to the repricing of customer transactions; the relationship between key official interest rates set by Monetary Authorities and market determined interest rates; and the assumption of a constant balance sheet by size and composition. The sensitivities should not be considered a forecast of future performance in these rate scenarios as they do not capture potential management action in response to unexpected changes in the interest rate environment.

Operational Risk Bank of Ireland Group plo

Operational risk definition

Operational risk is defined as the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. This risk includes Business Continuity, Data Quality and Availability, Information Security and Cyber Risk, Information Technology, Legal and Contractual, Model, Payments, Sourcing, Financial and Regulatory Reporting, Change Execution Risk and Physical Security.

Risk management

The Group faces operational risks in the normal pursuit of its business objectives. The primary goals of operational risk management are ensuring the sustainability and integrity of the Group's operations and the protection of its reputation by controlling, mitigating or transferring the impact of operational risk. Operational risk cannot be fully eliminated. The Group has established a formal approach to the management of operational risk in the form of an 'Operational Risk Framework' which defines the Group's approach to identifying, assessing, managing, monitoring and reporting the operational risks which may impact the achievement of the Group's business objectives.

This framework outlines, inter alia the following:

- •formulation and dissemination of a Operational Risk Policy specifying the risk management obligations of management and staff within the Group;
- •maintaining organisational structures for the oversight, monitoring and management of operational risk throughout the Group,
- •setting aside capital and maintaining a suite of insurance policies;
- •Setting out the boundary conditions in which operational risks are to be managed, by way of Board approved Risk Appetite Statement; and
- •Embedding formal operational risk management processes and standards throughout the Group.

Operational risk policy and governance

The Group continues to maintain its ongoing oversight and control of its exposure to operational risk. A critical component of the operational risk framework is a BRC approved Operational Risk Policy which sets out the Group's objectives and the obligations of management in respect of operational risk.

Governance and oversight of operational risk forms part of the Group's Risk Framework which aims to ensure that risk management activities are adequate and commensurate with the Board approved risk appetite. The GORC is appointed by the ERC and is responsible for the oversight and monitoring of operational risk within the Group and material subsidiaries. Business units hold primary responsibility for the management of operational risk and compliance with internal control requirements.

The Non-Financial Risk Function is accountable for the development and maintenance of an Operational Risk Framework to ensure a robust, consistent and systematic approach is applied to managing operational risk exposures across the Group.

Operational risk appetite

The Board has set out its appetite for operational risk in terms of both qualitative factors and quantitative measures reflecting the nature of non-financial risks. As such, the monitoring of operational risk indicators is supplemented with qualitative review and discussion at senior management executive committees to ensure appropriate actions are taken to enhance controls.

Risk assessment

A systematic identification and assessment of the operational risks faced by the Group is a core component of the Group's overall operational risk framework. This is known as the Risk and Control Self Assessment (RCSA) and is a framework for capturing, measuring and managing operational risk as well as providing a mechanism for consistent identification, monitoring, reviewing, updating and reporting of risks throughout the Group. A key element of this process is the categorisation of risks by taxonomy.

Risk mitigation and transfer

In addition to business unit risk mitigation initiatives, the Group implements specific policies and risk mitigation measures for key operational risks including, but not limited to, sourcing, technology and business disruption risks. This strategy is further supported by risk transfer mechanisms such as the Group's insurance programme, whereby selected risks are reinsured externally. The Group Insurance programme is reviewed annually to ensure coverage remains appropriate to the Group's risk management objectives. The Group's total capital requirement arising from operational risk is calculated using an internal model based on outputs of the scenario analysis programme as part of the ICAAP process.

Risk reporting

Regular reporting of operational risk is a key component of the Group's Operational Risk Framework.

The Board receives monthly update on the operational risk profile via the Board Risk Report which provides a timely assessment of material operational risks against risk appetite.

At least four times a year, the Head of Non-Financial Risk reports to GORC on the status of operational risk in the Group, including the status of the material operational risks, the progress of risk mitigation initiatives and programmes, significant loss events, and the nature, scale and frequency of overall losses.

In addition, specified operational risk information is collated for the purposes of reporting to regulatory supervisors in the jurisdictions in which the Group operates.

Operational risk Bank of Ireland Group plc

The Group holds operational risk capital to cover the potential financial impact of operational risk events, and uses the Standardised Approach (TSA) to determine its Pillar 1 capital requirement. Risk exposure amount for operational risk at 31 December 2021 are €4.2 billion (2020: €4.2 billion).

giand liquidity risk management framework which encompasses the liquidity policies, systems and controls in place to ensure that the Group is set to address its daily liquidity obligations and to withstand a period of liquidity stress. Principal components of this framework are the Group's Risk Appetite St socialed limits and the Group's Funding and Liquidity Policy, both of which are approved by the Board on the recommendation of ALCO. Funding and lique The Group has es

The Group Funding and Liquidity Policy outlines the Group's governance process with respect to funding and liquidity risk, and sets out the core principles that govern the manner in which the risk is mitigated, monitored and managed. The operation of this policy is delegated to the Group's ALCO.

Liquidity risk management within the Group focuses on the control, within prudent limits, of risk arising from the mismatch in contracted maturities of assets and liabilities and the risks arising from undrawn commitments and other contingent liabilities. The Group manages its liquidity by jurisdiction with liquid assets predominantly held in the

The Group seeks to maintain a stable funding base with loan portfolios funded substantially by granular retail originated deposits with any residual funding requirements principally met through term wholesale funding and equity.

The Group's treasury function within Group Finance provides top down centralised management of the Group's funding and liquidity position including overall responsibility for the management of the Group's funding position and funding strategy. This ensures a coordinated approach to balance sheet management and is accomplished through the incorporation of funding and figuidity risk appetitie merics into risk appetite at a consolidated level, monitoring liquidity metrics for each jurisdiction and compliance by the business units with the Group's funds transfer pricing policy.

The Group Market and Liquidity Risk function provides independent oversight of funding and liquidity risk and is responsible for proposing and maintaining the Group's funding and liquidity risk management framework and associated risk appetite metrics.

The Group's cash flow and liquidity reporting processes provide management with daily liquidity risk information by designated cash flow categories. These processes capture the cash flows from both on-balance sheet and off-balance sheet transactions.

nagement reviews funding and liquidity reports and stress testing results on a daily, weekly and monthly basis against the Group's Risk Appetite Statement. It is the consibility of ALCO to ensure that the measuring, monitoring and reporting of funding and injudity is adequately performed and complies with the governance framework Board monitors afference to the liquidity risk appetite through the monthly Search Risk Report.

Liquidity risk management consists of two main activities:

*structural liquidity management focuses on the balance sheet structure, the funding mix, the expected maturity profile of assets and liabilities and the Group's debt issuance strategy, and

*tactical liquidity management focuses on monitoring current and expected daily cash flows to ensure that the Group's liquidity needs can be met.

Both activities require consideration of the potential hedging actions required with respect to the Group's balance sheet and also the market risk exposures which may occur through this hedging.

The management of market risk in the Group is governed by the Group's Risk Appetite Statement and by the Group Policy on Market Risk, both of which are approved by the Board. These are supplemented by a range of ALCO approved limits and controls. The Group has an established governance structure for market risk that involves the Board, its risk committees (Risk and GRFO), and ALCO, which has primary responsibility for the oversight of market risk in the Group.

The Board monitors adherence to market risk appetite through the monthly Board Risk Report.

The Group makes extensive use of derivatives to hedge its balance sheet, service its customer needs and, to a lesser extent, assume discretionary risk. The Group's participation in derivatives markets is subject to policy approved by the ALCO. The Group makes a clear distriction between derivatives which must be transacted on a perfectly hedged basis and those whose risks can be managed within broader interest rate or FX books.

The approach to hedging and managing market risk is governed by policies explicitly designed to ensure that all hedging activities are risk reducing. Structural risk is managed by way of selective and strategic hedging initiatives which are executed under ALCO's authority.

In line with the BRRD for EU banks, the Group maintains both a Recovery Plan and a Contingency Funding Plan which sets out a suite of potential funding and liquidity options which could be exercised to restore financial stalling and validity and validity for the event of a major stress event. The Group's Recovery Plan is approved by the Board on the recommendation of RRC and ALCO. The Group's Contingency Funding Plan is approved by ALCO.

The annual LAAP enables the Board to assess the adequacy of the Group's funding and liquidity risk management framework, to assess the key liquidity and funding risks to which it is exposed; and details the Group's approach to determining the level of liquid assets and contingent liquidity that is required to be maintained under both business as usuals and severe tress scenarios.

A key part of this assessment is cash flow forecasting that includes assumptions on the likely behavioural cash flows of certain customer products. Estimating these behavioural cash flows allows the Group assess the stability of its funding sources and potential liquidity requirements in both business as usual and stressed scenarios. The stressed scenarios incorporate Group specific and systemic risks and are nut a different fewels of possible, event in fullowly, sereifly. Actions, testangies available to mitigate the impacts of the stress scenarios are evaluated as to their appropriateness. Stress test results are reported to ALCO, the BRC and the Board.

- The Board, having considered the Group ILAAP, is satisfied that it demonstrates that:

 * Appropriate governance, systems and controls are in place to identify, assess and manage the Group's funding and iquidity risks;

 * The Group maintains adequate levels of Counterbalancing Capachy (including liquid assets), under both normal and stressed conditions to cover its short and medium-term liquidity risks over an appropriate set of time horizons, including intraday periods; and

 * The Group is maintain with collections are adequately in my ensuring the Group is funded in a stable, sustainable and cost effective way with lending growth funded by stable.

The Board is confident that the assessment process undertaken to produce the ILAAP is complete and robust. On this basis the Board concludes that the volume and cape of liquidity resources available to the Group are adequate to support is business model, to achieve its strategic objectives, to withstand severe but plausible liquidity stress scenarios and to mater regulator prequirements including the Liquidity Coverage and Net State Funding Ratios.

nding and liquidity risk arises from a fundamental part of the Group's business model; the maturity transformation of primarily short term deposits into longer term loans. The pup's funding and liquidity strategy is to maintain a stable funding base with loan portfolios substantially funded by retail originated customer deposit portfolios.

nding and liquidity strategy is to maintain a stable funding base winn ioan pursuance assurances; a stable funding base with ioan pursuance assurances; a stable funding base with ioan post as of notificial graphs and in the post and in th

EU LIQB - qualitative information on LCR disclosures.

The Group is principally funded via granular retail originated deposits which are the primary driver of movements in the LCR over the period. Customer Deposits are originated in the Group's core franchises in ROI and UK with the top 20 deposits representing c.3.6%% of the Group's deposit base.

The Group expects to remain a substantially deposit funded institution with loan portfolios principally funded by granular retail customer deposits and modest term wholesale funding issuance primarily to meet the Group's MREL requirements.

The Group's strong LCR derives from increased deposit funding over the reference period.

The Group's liquidity buffer is comprised primarily of unencumbered High Quality Level 1 Liquid Assets.

The Group has modest net derivative exposures which primarily relate to the hedging of its own interest rate & currency risk. The outflows related to derivative and other collateral requirements are primarily potential outflows under the adverse market scenario included in LCR per Article 423(3) of Regulation (EU) No 575/2013.

The Group manages its liquidity by jurisdiction with separate liquidity centres for each:

- GovCo is the Group's principal operating entity and one of the Group's two liquidity centres incorporating BOIMB and all subsidiaries except BOI UK
- BOI UK is the Group's UK regulated subsidiary and the second liquidity centre. As such, it is separately managed from a liquidity perspective though there are intragroup flows between the two entities with GovCo providing unsecured wholesale funding to BOI UK.

From an LCR perspective, the Group holds GBP denominated liquid assets to meet GBP denominated LCR outflows.

1 The Group's Net Stable Funding Ratio (NSFR) for 31 December 2021 is prepared on a regulatory group basis, in accordance with the EU Capital Requirement Regulations and Directive, as amended, which require the maintenance of a NSFR ratio greater than or equal to 100%, effective June 2021. Comparative NSFR, for 31 December 2020 is calculated based on the Group's interpretation of the Basel Committee on Banking Supervision October 2014 document.

The Group calculates additional liquidity outflows corresponding to collateral needs resulting from the impact of an adverse market scenario on the Group's derivative transactions using the Historical Look Back Approach (HLBA) as guided by the EBA. In preparing the LCR, the Group recognises restrictions on the transferability of liquidity between jurisdictions with surplus liquid assets in one jurisdiction not transferable to another jurisdiction.

Tables 9.4, 9.5 and 9.6 are designed to show the amounts of encumbered and unencumbered assets held by the Group. Assets are differentiated between those that are available for potential funding needs. All tables below are based on EBA reporting templates pertaining to Asset Encumbrance under CRD. Please note that all figures are median values based on quarter end point-intime (PiT) figures covering the year ended 31 December 2021.

As part of managing its funding requirements, the Group from time to time encumbers assets, as collateral to support wholesale funding initiatives. This would include covered bonds, asset backed securities, securities repurchase agreements and other structures that are secured over customer loans, primarily mortgages. At 31 December 2021, €24.1 billion of the Group's assets and collateral received were encumbered, primarily through these structures within GovCo, BOIMB and BOIUK Plc. The Group's total encumbered assets increased during 2021, driven by its participation in TLTRO III borrowing €10.8bn; the proceeds of which were then placed with the ECB. In addition c.€2bn of previously unencumbered mortgages were encumbered within the Group's Special Mortgage-Backed Promissory Note GovCo programme.

Covered bonds, a key element of the Group's long term funding strategy are issued through its subsidiary Bank of Ireland Mortgage Bank (BoIMB). BoIMB is registered as a designated mortgage credit institution to issue Irish Asset Covered Securities (ACS) in accordance with relevant legislative requirements. BoIMB is required to maintain minimum contractual overcollateralization of 5% and minimum legislative overcollateralization of 3% (both on a prudent market value basis). This is monitored by the Covered Asset Monitor on behalf of the Central Bank of Ireland. The incidence of over-collateralisation on the levels of encumbrance is treated in line with the EBA guidelines on encumbrance.

The Group manages liquidity by jurisdiction and monitors asset encumbrance by jurisdiction. At 31 December 2021, €5.3 billion of encumbered assets are denominated in GBP, with associated liabilities of €4.1 billion, primarily related to drawings under the Bank of England (BOE) Term Funding Scheme and Notes in circulation.

At 31 December 2021, the Group has €108.8 billion of unencumbered assets. Included in this amount are assets of €5.1 billion which would not be deemed available for encumbrance in the normal course of business and include intangible assets, tax assets, fixed assets and derivative assets.

At 31 December 2021, the Group has \in 4.1bn of assets included within retained securitisations (\in 1.0bn) and retained covered bonds (\in 3.2bn). Of these assets, \in 2.4bn is encumbered within retained securitisations (\in 0.5bn) and retained covered bonds (\in 1.9bn).

Leverage ratio Bank of Ireland Group plc

The leverage ratio measures the level of Tier 1 capital against both on and off balance sheet exposures. As at 31 December 2021, the leverage ratio was 6.55% on a regulatory basis (31 December 2020: 7.07%).

The purpose of monitoring and managing this metric is to enable Regulators to constrain the build-up of excessive leverage, which was considered to be one of the drivers of the banking crisis.

Tables 9.1, 9.2 and 9.3 illustrate the leverage ratio calculated in accordance with Articles 429 and 499 of the CRR and a breakdown of the Group's leverage ratio exposure as at 31 December 2021 on a regulatory basis.

The European Commission has introduced a binding leverage requirement of 3%. The Group expects to remain well in excess of this requirement.

LRQua: Disclosure on qualitative items

The leverage ratio is designed to serve as an important backstop to the risk-based capital measures by constraining the build-up of leverage in the banking system and providing an extra layer of protection against model risk and measurement error.

Leverage is the extent to which a firm funds its assets with borrowings rather than equity. More debt relative to each euro of equity results in a higher level of leverage. The leverage ratio measures the extent to which a firm has financed its assets with equity. It does not take into account what those assets are, or what their risk characteristics are. Leverage ratios effectively place a cap on borrowings as a multiple of a bank's equity.

The definition of the leverage ratio is Tier 1 capital divided by total assets (which include derivatives, SFT's, undrawn balances).

The European Commission has introduced a binding leverage requirement of 3% which will be applicable from 28 June 2021. The Group expects to remain well in excess of this requirement.

The Group's capital and exposures are monitored on a monthly basis which covers both a historical and a forward looking viewpoint. When proposed transactions or movements in capital or assets are being considered the impact on the leverage ratio is taken into account. The Group closely monitors the leverage ratio to ensure all regulatory requirements and internal targets are met. In addition the leverage ratio is monitored against the Board approved Risk Appetite Statement and suite of Recovery Indicators.

Table 10.1 below represents the reconciliation of the Total leverage exposure measure with the relevant information disclosed in the Group's interim published financial statements.

The Group Remuneration Committee (GRC) has the response corporate governance. The GRC held 11 meetings in 2021.

With delegated authority from the Board, the GRC annually reviews and approves the Group Remuneration Policy and the Director's Remuneration Policy (DRP). The GRC also reviews and approves the remuneration of the Chairman of the Board, the Executive Directors, the Group Secretary, members of the GEC and Senior Officers in Independent Control Functions, as well as overseeing the remuneration of all staff whose professional activities have a material impact on the Group's risk profile.

ent advice was received by the GRC from the Committee's independent external advisers, PricewaterhouseCoopers (PwC) on a range of issues relating to remuneration including

- o remuneration benchmarking for Executive Directors; o variable pay structures for all colleagues, including annual and long term incentive schemes;
- evolving pay regulations and market pay practices; and other remuneration structures.

Scope
The Group's objective of attracting, retaining and motivating high calibre people is deemed fundamental to the successful delivery of the Group's business strategy. The Group wants to ensure the right people are in the right roles and recognises the importance that the Group's shareholders place on the operation and management of the Group's remuneration framework. The Group Remuneration Policy provides a framework for all colleagues and directors of the Group and its wholly owned subsidiaries. To reflect this, the Group operates strong governance across the organisation on the management of its remuneration framework.

The Policy applies, in its entirety, to all Group employees, directors (including Non-Executive directors), self-employed external contractors and temporary employees in all institutions and other entities within the scope of prudential consolidation, including all branches. This Policy does not apply to Joint Ventures, which are subject to specific contractual agreements with Joint Venture partners.

Bank of lestand (UK) pic and New Ireland Assurance Company have their own Remuneration Policies which are consistent with the Group Policy, while compliant with relevant regulations, and are approved by their own board and/or board remun committees and their Chief People Officer equivalent role blocker. Local regulations or statutory requirements will overdened this policy where applicable.

Material Risk Takers
Staff whose professional activities have a material impact on the Group risk profile are identified as Material Risk Takers (MRTs) and can be summarised as: the management body; senior management, other staff with key functional, managerial responsibilities and staff who individually, or as part of a committee, have authority to approve new business products or to commit to credit risk exposures and market risk transactions above certain levels. All Pre-approval Controlled Function holders and Key function holders are identified as MRTs as well as a number of senior staff whose quantum remuneration requires them to be identified as MRTs.

Remuneration Restrictions
The application of market aligned remun

resentations.

The Remuneration Restrictions were contained within the Covered Institutions Financial Support Scheme 2008 and the Minister's Letter (July 2011), under which the Group gave a number of commitments and undertakings to the Minister for Finance in respect of remuneration practices. The Minister's Letter was a further condition of the Transaction and Underwriting Agreement entered into with the Irish Government (July 2011) during the 2011 Recapitalisation of the Group. The Group maintains a dialogue with the Department of Finance in relation to Executive Director remuneration and other remuneration related topics and will respond appropriately to any revisions to the Remuneration Restrictions.

As a result of the Remuneration Restrictions the Group is currently unable to provide a fixed/variable remuneration mix throughout the Group and is precluded from introducing any new bonus or incentive schemes, allowances or other fringe bens without prior agreement of the Department of Finance. Consequently, the absence of performance based variable pay, combined with the requirement to operate within an overall remuneration cap on individual salaries and allowances, constrainability of the Group to clearly ink Group culture and values, risk culture, ESG objectives, customer outcomes and Group performance to remuneration. This results in risks in terms of attraction and retention, a lack of remuneration afignment with business goads, as well as some restrictions on the application of discretion and cost base inflexibility. A limited retention scheme in BO(UK)pic has been approved which is not subject to the Remuneration Restrictions (currently comprising 9 individuals, none of whom are identified as Material Risk Takers for the Group).

MRT Remuneration

The Remuneration ethos is to reward employees fairly and competitively for their contribution to the Group. Reward arrangements are reviewed on a regular basis to assess competitiv acknowledging constraints of the Remuneration Restrictions. The following principles are applied:

The Group seeks to reward all employees fairly and transparently, and promotes the concept of 'equal pay for equal work' through operating a consistent approach to remuneration for collegaues. Reward structures are designed to attract, retain and

- The Outloy beeks to level and interpuers early and a impurering and to an puering, and promotes are concept or engage high cashine employees.

 Outstormer focused variable lief interested shuckines

 Outstormer focused variable lief interested outstormers

 Outstormer focused variable lief interested outstormers

 Outstormer and public interests.

 Avoid any conflict with an employee's duty to act in the best interests of customers or clients

 Inclusive basis. Inclusive basis
 The Policy is designed and implemented on an inclusive basis, including gender-neutrality, with pay for male and female colleagues monitored on an annual basis. Monitoring is completed by People Services and reported to the Group Remunt

The Group uses recognised external benchmarks to understand the remuneration levels of industry peers and remuneration offered by other industries who compete with the Group for talent in each of the Group's geographical locations. Monitoring is completed by Reward and reported to the Group Remuneration Committee.

o Performance aligned
Due to the Remuneration Restrictions remuneration is only weakly aligned to performance via the potential salary increase awarded as part of the annual salary review process, which is dependent on a colleague's performance reting (based on performance via the potential salary increase awarded as part of the annual salary review process, which is dependent on a colleague's performance versus financial and non-financial goals). The absence of performance based variable pay precludes the Group from aligning the remuneration of employees with the achievement of longer term customer, financial and strategic goals.
However, divisional and individual performance measures and targets are aligned with business and risk strategy, culture and values, and long-perm interests.

o Risk aligned
Due to the Remuneration Restrictions, the alignment between remuneration and risk management, is limited due to the unavailability of variable remuneration to further incentivise prudent risk management. Each employee has risk goals as part of their individual performance achievement process which informs their end of year performance rating, thereby influencing their base pay level under the annual salary review process. A strong risk culture is promoted throughout the Group which encompasses the general awareness, attitude and behaviour of everyone in the Group to the taking and management of appropriate risk. Management Body review of Group Remuneration Policy
The GRC reviewed and approved an updated Group Remuneration Policy in 2021. The Policy was amended to clarify the impact of the Remuneration Restrictions on the remuneration approach for all stakeholders including colleagues, management,

Remuneration of Senior Officers in Independent Control Functions

Remuneration of Senior Officers in Independent Control Functions
The Group defines employees of Independent Control Functions as employees of Group Risk who are in a risk management or compliance role, as well as employees of Group Internal Audit, in line with regulations. Thus, Senior Officers in Independent Control Functions are identified as:

o the Group Chief Risk Officer and the Group Chief Internal Auditor;

those in management roles reporting directly to either the Group Chief Risk Officer or the Group Chief Internal Auditor;

o those in management roles reporting directly to either the Group Chief Risk Officer or the Group Chief Internal Auditor;

o those in management roles reporting directly to either the Group Chief Risk Officer or the Group Chief Internal Auditor;

The remuneration of senior officers in Independent Control Functions is directly overseen by the Group Remuneration Committee.

As a result of the Remuneration Restrictions, all remuneration for Group Risk and Group Internal Audit is currently entirely fixed, except for severance. Upon the removal of the Remuneration Restrictions, the remuneration of independent control functions will be predominantly fixed, to reflect the nature of their responsibilities and independence and will have specific variable remuneration arrangements applied to reflect their independence from the divisions that they support to prevent potential conflicts of interest.

Severance payments and guaranteed variable remuneration
Severance payments and guaranteed variable remuneration
Severance payments comply with relevant remuneration regulations and are made in accordance with approved criteria for all colleagues. Severance payments do not reward failure or misconduct. In particular, severance payments are not awarded where there is obvious failure which allows for the immediate cancellation of a contract or the dismissal of a colleague. The Group operates standard voluntary parting terms, including optional early retirement for eligible colleagues. There is no guaranteed variable remuneration permitted.

Risk Management
Due to the Remuneration Restrictions, there is limited alignment between remuneration and risk management due to the unavailability of variable remuneration to further incentivise prudent risk management. Each employee has risk goals as part of the rindividual performance achievement process which informs their end of year performance rating, thereby influencing their base pay level under the annual salary review process. A strong risk culture is promoted throughout the Group which encompasses the general awareness, attitude and behaviour of everyone in the Group with the taking of appropriate risk managed within the boundaries of Group risk appetite to enable the Group safely achieve its strategic priorities.

There is cross-membership between the Group Remuneration Committee and the Board Risk Committee.

The Group Chief Risk Office attends at least one Group Remuneration Committee meeting per year to report on the Group's risk profile, its financial condition and future prospects, and to consider the implications of remuneration policies, if any, for risk and risk management within the Group.

Fixed to Variable Remuneration Ratio

Alignment of Remuneration to Performance

Due to the Remuneration Restrictions, there is limited alignment between remuneration and performance via the potential salary increase awarded as part of the annual salary review process, which is dependent on a colleague's performance ratio (based on performance versus financial and non-financial goals). The absence of performance based variable pay precludes the Group from aligning the remuneration of employees with the achievement of longer term customer, financial and st goals. However, divisional and individual performance measures and targets are aligned with business and risk objectives at either a Group or local business level, through a performance achievement process, ensuring alignment with business risk strategy, culture and values, and long-term interests.

Adjustment of Remuneration to account for Long-term Performance

The Group cannot adjust remuneration to take account of long-term performance as the Group is not allowed to provide variable pay due to the Remuneration Restric

Parameters and Rationale for components of Variable Pay schemes

Not applicable - The Group cannot offer variable remun ration due to the Remuneration Restriction

Management Body Remuneration

neration for each member of the management body is disclosed in the annual report and accounts of the Group. The remuneration of senior management is made available to the Department of Finance and the Central Bank of Ireland The total remu as required.

as required.

oval is required to 'reduce, reducen or repurchase Common Equily Tier 1 instruments lissued by the institution in a manner that is permitted under applicable radional law', re the matriction on the recognition of subsidiary capital instruments (Articles 85 & 87° CRR). This matriction is calculated on at state basis rather than instrument by instrument.

ADDEMON. V. REPROD PARTY TRANSLIGIONS.

Related parties in the Group include the parent company, BOIG pic, subsidiary undertakings, associated undertakings, joint arrangements, post-employment benefits, the State, KMP are number of banking transactions are entered into between the Company and its subsidiaries in the normal course of business. These include extending secured and unsecured loans, in issued by subsidiaries, taking of deposicia and undertaking foreign currency transactions.

a. Associates, joint ventures and joint operations.
The Group provides to and receives from its associates, joint ventures and joint operations, certain banking and financial services, which are not material to the Group, on similar terms to third party transactions. These include loans, deposits and foreign currency transactions.

b. Pension funds
The Group provides a range of normal banking and financial services, which are not material to the Group, to various pension funds operated by the Group for the benefit of its employees (principally to the BSPF), which are conducted on similar terms to third party transactions.

The Group occupies one property owned by the BSPF. At 31 December 2021, the total value of this property was €36 million (2020: €36 million). In 2021, the rental income paid to BSPF was €2 million (2020: €2

At 31 December 2021, BSPF assets included BOIG plc shares amounting to €5 million (2020: €3 million).

c. Transactions with the State
The Group considers that the State is a related party under IAS 24 as it is in a position to exercise significant influence over the Group.

d. Transactions with Directors and Key Management Personnel

(I) Leans to Directors.

The following information is presented in accordance with the Companies Act 2014, as amended ('Companies Acts'). For the purposes of the Companies Acts disclosures, Directors means the Board of Directors who were Directors during the relevant period. Where no amount is shown in the tables below, this indicates either a credit balance, a balance of fenil, or a balance of less than 6500. The value of companies Act 2014, expressed as a percentage of the net assets of the Group at bedgeining and end of the financial year, is less than 150.

			Aggregate maximum amount outstanding

M O'Grady, G Andrews, R Goulding, I Buchanan and S Pateman had no loans from the Group in 2021. No advances were made during the year. No amounts were waived during 2021. None of the loans were credit-impaired as at 31 December 2021. There is no interest which having fallen due on the above loans has not been paid in 2021 (2020: Grill).

All Directors have other transactions with the Bank. The nature of these transactions includes investments, pension funds, deposits, general insurance, life assurance and current accounts with credit balances. Other than as indicated, all loans to Directors are made in the ordinary course of business on substantially the same terms, including interest rates and collateral, as those prevailing at the time for similar transactions with other persons unconnected with the Group and of similar financial standing and do not involve more than normal risk of collectability.

(ii) Loans to connected persons on favourable terms

(ii) could be connected persons on arounds terms	Balance as at 31 December 2021	Maximum amounts outstanding during 2021		Maximum number of persons during 2021

E Bourke	1	5	2	2

- (iii) Loans to connected persons Central Bank licence condition disclosures
 Under its banking licence, the Bank is required to disclose in its annual audited financial statements details of:
 the aggregate arount of lending to all connected persons, as defined in Section 220 of the Companies Act 2014; and
 the aggregate maximum amount outstanding during the year for which those financial statements are being prepared.

Disclosure is subject to certain de minimis exemptions and to exemptions for loans relating to principal private residences where the total of such loans to an individual connected person does not exceed €1 million. The following information is presented in accordance with this licence condition

Connected persons of the following directors	Balance as at 31 December 2021 €000	Maximum amounts outstanding during 2021 €000		Maximum number of persons during 2021
Persons connected to P Kennedy	2,036	2,152	1	1

(iv) Key management personnel - Ioans and deposits (IAS 24)
For the purposes of IAS 24 Related party disclosures; the Group has 24 KMP (2020: 24) which comprise the Directors, the members of the GEC and any past KMP who was a KMP during the relevant period. In addition to Executive Directors, the GEC comprises the Origon Secretary & Head of Corporate Governance, Chief of Staff and Head of Group Corporate Affairs, Chief Executive - Retail (UK), Chief Marketing
Officer, Chief People Officer, Chief Executive - Corporate & Markets, Origin Executive - Origin Executive - Corporate & Markets, Origin Executive - Origin Executive - Origin Executive - Origin Executive - Origin Executive - Origin Executive - Origin Executive - Origin Executive - Origin Executive - Or

Other than as indicated, all loans to NEDs are made in the ordinary course of business on substantially the same terms, including interest rates and collateral, as those prevailing at the time for similar transactions with other persons unconnected with the Group and do not involve more than the normal risk of collectability. Loans to KMP other than NEDs are made on terms similar to those available to staff generally and/or in the ordinary course of business on normal commercial terms.

Maximum amount

The aggregate amounts outstanding, in respect of all loans, quasi-loans and credit transactions between the Bank and its KMP, as defined above, together with members of their close families and entities influenced by them are shown in the following table:

	Balance as at	Balance as at	outstanding during		
	1 January	31 December	the year ended 31	Total number of	Total number of
	2021	2021	December 2021	relevant KMP as at 1	relevant KMP as at 31
Key management personnel	€000	€000	€000	January 2021	December 2021
Loans	3,139	3,338	4,124	17	14
Deposits	14,060	6,842	18,576	23	20

KMP have other protection products with the Bank. The nature of these products includes mortgage protection, life assurance and critical illness cover. It also includes general insurance products whic underwritten by a number of external insurance companies and for which the Bank acts as an intermediary only. None of these products has any encashment value at 31 December 2021 (2020; Enil).

Included in the above loan disclosure figures are loans to KMP and close family members of KMP on preferential staff rates, amounting to €4,239 (2020: €5,003).

None of the loans were credit-impaired as at 31 December 2021. There is no interest which having fallen due on the above loans has not been paid in 2021 (2020: £nil). There are no guarantees entered into by the Bank in favour of KMP of the Bank and no guarantees in favour of the Bank have been entered into by KMP of the Bank.

v) Compensation of KMP
Details of compensation paid to KMP are provided below:

Remunerations	2021 €000
Salaries and other short-term benefits	9,130
Post employment benefits	506
Termination benefits	-
